Which of the following is not an abiotic component of an ecosystem?
A) Bacteria
B) Temperature
C) Soil
D) Water
ANSWER: A
In the 10% law of energy flow, if plants capture 10,000 kcal of energy, how much will be available to herbivores?
A) 1000 kcal
B) 10 kcal
C) 1,000 kcal
D) 5,000 kcal
ANSWER: A
Which organization monitors environmental issues globally?
A) UNEP
B) WHO
C) UNICEF
D) UNESCO
ANSWER: A
Which term refers to the variety of life on Earth?
A) Biodiversity
B) Ecology
C) Habitat
D) Conservation
ANSWER: A
What does the 3Rs principle stand for?
A) Reduce, Reuse, Recycle
B) Rebuild, Reuse, Reboot
C) Reduce, Recycle, Recover
D) Recycle, Reuse, Repeat
ANSWER: A
The Environment (Protection) Act was enacted in which year?
A) 1986
B) 1972
C) 1992
D) 2000
ANSWER: A
World Environment Day is celebrated on:
A) June 5
B) 2022-04-01 00:00:00
C) December 1
D) 2021-03-01 00:00:00
ANSWER: A
The Environment (Protection) Act was enacted after which global event?
A) Bhopal Gas Tragedy
B) Rio Earth Summit
C) Kyoto Protocol
D) Stockholm Conference
ANSWER: A
The most common indicator of water pollution is:
A) Dissolved Oxygen
B) pH
C) Salinity
D) Conductivity
ANSWER: A
Which parameter indicates the amount of oxygen required by microorganisms to decompose organic matter?
A) BOD
B) COD
C) DO
D) TOC
ANSWER: A
COD in water represents:
A) Oxygen required to oxidize organic & inorganic matter chemically

B) Oxygen used by microorganisms
C) Oxygen dissolved in water
D) Oxygen consumed by fish
ANSWER: A
Which type of waste increases BOD levels in water?
A) Organic waste
B) Plastic waste
C) Heavy metals
D) Salts
ANSWER: A
Which of the following is a biotic component of an ecosystem?
A) Fungi
B) Light
C) Temperature
D) Water
ANSWER: A
High BOD in a river indicates:
A) Heavy organic pollution
B) Good water quality
C) High dissolved oxygen
D) Low organic load
ANSWER: A
Dissolved Oxygen (DO) is essential for:
A) Aquatic life survival
B) Maintaining pH
C) Reducing hardness
D) Neutralizing toxins
ANSWER: A
Typical BOD of clean drinking water is:
A) < 1 mg/L
B) 10 mg/L
C) 50 mg/L
D) 100 mg/L
ANSWER: A
When sewage is discharged into water, DO levels:
A) Decrease
B) Increase
C) Remain constant
D) Become zero immediately
ANSWER: A
The presence of high COD compared to BOD indicates:
A) Presence of toxic pollutants
B) Only biodegradable waste
C) No pollution
D) Absence of chemicals
ANSWER: A
Major source of organic pollution in rivers is:
A) Domestic sewage
B) Industrial salts
C) Thermal pollution
D) Mining
ANSWER: A
In a polluted river, DO levels are usually:
A) < 4 mg/L
B) 8–10 mg/L
C) 12–15 mg/L
D) > 20 mg/L
ANSWER: A
Eutrophication of lakes is mainly due to:
A) Excess nutrients (N, P)
B) High DO
C) Low COD
D) Neutral pH
ANSWER: A

Which unit is used to express BOD and COD?
A) mg/L
B) g/L
C) ppm
D) %
ANSWER: A
DO in water is replenished mainly by:
A) Photosynthesis & Atmospheric diffusion
B) Sedimentation
C) Decomposition
D) Oxidation
ANSWER: A
The primary source of energy driving ecological cycles is:
A) Solar radiation
B) Wind
C) Soil minerals
D) Water cycle
ANSWER: A
The self-purification of rivers is due to:
A) Re-aeration & microbial degradation
B) COD increase
C) Acidification
D) Evaporation
ANSWER: A
Which is more rapid as a test for pollution?
A) COD test
B) BOD test
C) DO test
D) pH test
ANSWER: A
If BOD = 300 mg/L in wastewater, the water quality is:
A) Highly polluted
B) Clean
C) Moderately polluted
D) Potable
ANSWER: A
The most important parameter for measuring organic pollution load is:
A) BOD
B) Hardness
C) Turbidity
D) Alkalinity
ANSWER: A
The major pollutant responsible for acid rain is:
A) SO_2
B) CO_2
C) O_3
D) CH_4
ANSWER: A
Photochemical smog is mainly caused by:
A) NOx and hydrocarbons
B) CO_2 and SO_2
C) CO and CO_2
D) O_2 and N_2
ANSWER: A
The Air Quality Index (AQI) indicates:
A) Level of air pollution affecting health
B) Temperature variation
C) Rainfall prediction
D) Wind speed
ANSWER: A
The most harmful type of particulate matter for human lungs is:
A) PM2.5
B) PM10
C) PM100

D) Dust particles > 100 µm
ANSWER: A
The disease “Black lung disease” is associated with:
A) Coal miners (particulates)
B) Tobacco smoke
C) Lead poisoning
D) Asbestos
ANSWER: A
Ozone in the stratosphere is:
A) Beneficial, absorbs UV rays
B) Harmful, greenhouse gas
C) Cause of smog
D) A heavy metal
ANSWER: A
The second law of thermodynamics explains why:
A) Energy transfer between trophic levels is inefficient
B) Energy can be recycled in ecosystems
C) Nutrients are lost in food chains
D) Decomposers cannot recycle minerals
ANSWER: A
Ozone in the troposphere is:
A) Harmful air pollutant
B) Protective layer
C) Neutral gas
D) Not significant
ANSWER: A
Carbon monoxide pollution mainly affects:
A) Oxygen transport in blood
B) Nervous system
C) Vision
D) Bones
ANSWER: A
The main pollutant from automobiles is:
A) Carbon monoxide
B) Sulphur dioxide
C) Methane
D) CFCs
ANSWER: A
Which gas causes respiratory irritation and bronchitis?
A) SO_2
B) CO_2
C) CH_4
D) H_2
ANSWER: A
Which of the following is a greenhouse gas?
A) CO_2
B) N_2
C) Ar
D) O_2
ANSWER: A
The Bhopal gas tragedy (1984) was caused by leakage of:
A) Methyl isocyanate (MIC)
B) Ammonia
C) SO_2
D) Chlorine
ANSWER: A
Lead pollution in air mainly comes from:
A) Old vehicle exhaust (leaded petrol)
B) Nuclear plants
C) Forest fires
D) Soil erosion
ANSWER: A
The colorless, odorless, toxic gas that binds to hemoglobin is:
A) Carbon monoxide

B) Methane
C) Sulphur dioxide
D) Nitrous oxide
ANSWER: A
AQI value above 400 indicates:
A) Severe pollution
B) Good air quality
C) Moderate air quality
D) Satisfactory
ANSWER: A
Which pollutant damages the nervous system, especially in children?
A) Lead
B) SO_2
C) CO_2
D) O_3
ANSWER: A
Which ecosystem has the highest net primary productivity per unit area?
A) Tropical rainforest
B) Coral reefs
C) Open ocean
D) Desert scrub
ANSWER: A
The major cause of soil pollution is:
A) Excessive use of chemicals (pesticides, fertilizers)
B) Waterlogging
C) Wind erosion
D) Soil organisms
ANSWER: A
Soil pollution by heavy metals mainly comes from:
A) Industrial effluents
B) Biomass burning
C) Oxygen depletion
D) Acid rain
ANSWER: A
Excess nitrate in soil leads to:
A) Groundwater pollution
B) Ozone depletion
C) Acid rain
D) Soil erosion
ANSWER: A
Which of the following is not a biodegradable solid waste?
A) Plastic
B) Paper
C) Food waste
D) Wood
ANSWER: A
Municipal solid waste (MSW) in India is largely composed of:
A) Organic matter
B) Plastic
C) Metal
D) Glass
ANSWER: A
The process of controlled burning of solid waste at high temperatures is:
A) Incineration
B) Composting
C) Landfilling
D) Vermiculture
ANSWER: A
The process of converting organic waste into manure is:
A) Composting
B) Incineration
C) Recycling
D) Gasification
ANSWER: A

Sanitary landfills are used for:
A) Safe disposal of solid waste
B) Irrigation
C) Mining
D) Soil erosion control
ANSWER: A
Biomedical waste should be disposed of by:
A) Incineration
B) Composting
C) Open dumping
D) Landfilling
ANSWER: A
Which is considered hazardous waste?
A) E-waste
B) Food waste
C) Paper waste
D) Yard waste
ANSWER: A
The pyramids of number in a grassland ecosystem is usually:
A) Upright
B) Inverted
C) Spindle-shaped
D) Irregular
ANSWER: A
E-waste mainly contains:
A) Toxic heavy metals and plastics
B) Only organic matter
C) Pure biodegradable compounds
D) Harmless salts
ANSWER: A
Which metal is most common in e-waste?
A) Lead
B) Sodium
C) Calcium
D) Potassium
ANSWER: A
Mercury pollution in soil is commonly associated with:
A) Electronic waste
B) Textile industry
C) Agriculture
D) Forest fires
ANSWER: A
The best method of managing biodegradable solid waste is:
A) Composting
B) Open dumping
C) Burning
D) Deep burial
ANSWER: A
Which electronic device contributes the maximum to e-waste in India?
A) Mobile phones & computers
B) Refrigerators
C) Air conditioners
D) Printers
ANSWER: A
Which method is most eco-friendly for solid waste management?
A) Reduce, Reuse, Recycle (3Rs)
B) Open dumping
C) Incineration
D) Landfilling
ANSWER: A
The term "environment" refers to:
A) THE PHYSICAL AND BIOLOGICAL SURROUNDINGS OF ALL LIVING ORGANISMS
B) ONLY AIR AND WATER
C) ONLY PLANTS AND ANIMALS

D) CLIMATE ALONE
ANSWER: A
Which of the following is not included in the scope of environment?
A) MOBILE PHONE MODELS
B) NATURAL RESOURCES
C) POLLUTION CONTROL
D) CULTURAL HERITAGE
ANSWER: A
Which of the following best explains the scope of environmental studies?
A) STUDY OF ALL INTERACTIONS BETWEEN LIVING AND NON-LIVING COMPONENTS
B) STUDY OF SOIL ONLY
C) STUDY OF CHEMISTRY ONLY
D) STUDY OF FORESTS ONLY
ANSWER: A
The scope of environment includes the study of:
A) AIR, WATER, SOIL, AND LIVING ORGANISMS
B) ONLY HUMAN ACTIVITIES
C) ONLY WILDLIFE
D) ONLY NATURAL DISASTERS
ANSWER: A
Which one of the following statements is false?
A) Decomposers are absent in aquatic ecosystems
B) Energy flow in an ecosystem is unidirectional
C) Matter cycles within an ecosystem
D) Herbivores are primary consumers
ANSWER: A
Which statement is correct about the definition of environment?
A) ENVIRONMENT IS THE SUM TOTAL OF EXTERNAL FACTORS INFLUENCING AN ORGANISM
B) ENVIRONMENT MEANS ONLY PHYSICAL FACTORS
C) ENVIRONMENT INCLUDES ONLY SOCIAL CONDITIONS
D) ENVIRONMENT IS UNRELATED TO HUMAN ACTIVITIES
ANSWER: A
The interdisciplinary nature of environmental studies means it connects with:
A) NATURAL SCIENCES, SOCIAL SCIENCES, AND ENGINEERING
B) ONLY BIOLOGY
C) ONLY GEOGRAPHY
D) ONLY ECONOMICS
ANSWER: A
Scope of environmental studies does not include:
A) TECHNOLOGICAL PROGRESS UNRELATED TO ECOLOGY
B) CONSERVATION OF NATURAL RESOURCES
C) SUSTAINABLE DEVELOPMENT
D) ENVIRONMENTAL POLLUTION CONTROL
ANSWER: A
Which of the following describes the man-environment relationship?
A) HUMAN SURVIVAL AND DEVELOPMENT DEPEND ON ENVIRONMENT
B) HUMANS ARE SEPARATE FROM THE ENVIRONMENT
C) ENVIRONMENT HAS NO IMPACT ON HUMANS
D) TECHNOLOGY HAS ELIMINATED HUMAN DEPENDENCE ON ENVIRONMENT
ANSWER: A
Which of the following is the ultimate aim of environmental studies?
A) ENVIRONMENTAL PROTECTION AND SUSTAINABLE DEVELOPMENT
B) INDUSTRIAL GROWTH
C) ECONOMIC COMPETITION
D) URBANIZATION
ANSWER: A
Why is the environment important for human survival?
A) SUPPLIES NATURAL RESOURCES LIKE AIR, WATER, AND FOOD
B) PROVIDES ENTERTAINMENT
C) ONLY FOR TOURISM
D) REDUCES POPULATION
ANSWER: A
Which of the following is a direct benefit of a healthy environment?
A) BALANCED ECOSYSTEM

B) INCREASED DISEASES
C) GLOBAL WARMING
D) HABITAT DESTRUCTION
ANSWER: A
Forests are called the “lungs of the Earth” because they:
A) ABSORB CARBON DIOXIDE AND RELEASE OXYGEN
B) PRODUCE FOOD FOR ALL ANIMALS
C) ATTRACT RAINFALL ONLY
D) PROVIDE TIMBER ALONE
ANSWER: A
Why is biodiversity important?
A) IT MAINTAINS ECOLOGICAL BALANCE
B) IT INCREASES POLLUTION
C) IT DECREASES FOOD SUPPLY
D) IT CAUSES CLIMATE CHANGE
ANSWER: A
Which of the following is an example of an ecosystem service?
A) FRESHWATER SUPPLY
B) SOIL EROSION
C) GLOBAL WARMING
D) OZONE DEPLETION
ANSWER: A
A self-sustaining natural ecosystem is:
A) Pond
B) Agricultural field
C) Aquarium
D) Garden
ANSWER: A
How does a clean environment contribute to human health?
A) REDUCES SPREAD OF DISEASES
B) CAUSES RESPIRATORY PROBLEMS
C) INCREASES POLLUTION
D) INCREASES STRESS
ANSWER: A
Why should we conserve the environment for future generations?
A) TO PRESERVE RESOURCES AND BIODIVERSITY
B) TO INCREASE DEFORESTATION
C) TO CAUSE MORE URBANIZATION
D) TO REDUCE OXYGEN LEVELS
ANSWER: A
Which of the following best describes the importance of public awareness in environmental protection?
A) ENCOURAGES SUSTAINABLE PRACTICES
B) HELPS PEOPLE IGNORE POLLUTION
C) PROMOTES INDUSTRIAL WASTE DUMPING
D) SUPPORTS OVEREXPLOITATION OF RESOURCES
ANSWER: A
How does climate change prove the importance of environmental protection?
A) IT HIGHLIGHTS THE CONSEQUENCES OF IGNORING NATURE
B) IT SHOWS RESOURCES ARE UNLIMITED
C) IT REDUCES GLOBAL TEMPERATURES
D) IT IMPROVES SOIL FERTILITY
ANSWER: A
Which natural resource is essential for all living organisms and must be conserved?
A) WATER
B) GOLD
C) PETROLEUM
D) PLASTIC
ANSWER: A
The need for public awareness in environment and biodiversity is emphasized in:
A) AGENDA 21 OF THE EARTH SUMMIT (1992)
B) WORLD WAR II AGREEMENTS
C) INDUSTRIAL REVOLUTION POLICIES

D) NONE OF THESE
ANSWER: A
Which of the following is not a reason for creating public awareness about the environment?
A) TO PROMOTE DEFORESTATION FOR ECONOMIC GROWTH
B) TO CONSERVE BIODIVERSITY
C) TO MINIMIZE POLLUTION
D) TO ACHIEVE SUSTAINABLE DEVELOPMENT
ANSWER: A
Public awareness about biodiversity is important mainly to:
A) PROTECT ENDANGERED SPECIES
B) INCREASE HUNTING OF WILDLIFE
C) ENCOURAGE INDUSTRIAL POLLUTION
D) DECREASE RENEWABLE ENERGY USE
ANSWER: A
Lack of public awareness about environmental issues may lead to:
A) ENVIRONMENTAL DEGRADATION
B) IMPROVED BIODIVERSITY
C) PROTECTION OF WILDLIFE
D) INCREASED SUSTAINABILITY
ANSWER: A
Public awareness is crucial for biodiversity conservation because:
A) PEOPLE’S PARTICIPATION ENSURES BETTER IMPLEMENTATION OF LAWS
B) GOVERNMENT POLICIES ALONE ARE SUFFICIENT
C) TECHNOLOGY ELIMINATES THE NEED FOR PUBLIC PARTICIPATION
D) ONLY SCIENTISTS SHOULD WORK ON CONSERVATION
ANSWER: A
Which process in the ecosystem directly connects biotic and abiotic components?
A) Photosynthesis
B) Predation
C) Parasitism
D) Competition
ANSWER: A
The slogan “Think globally, act locally” is associated with:
A) PUBLIC AWARENESS IN ENVIRONMENTAL PROTECTION
B) GLOBAL WARMING AWARENESS
C) ECONOMIC DEVELOPMENT
D) SPACE RESEARCH
ANSWER: A
Which of the following is a direct outcome of public awareness in environment?
A) DEVELOPMENT OF ECO-FRIENDLY PRACTICES
B) OVEREXPLOITATION OF RESOURCES
C) DECREASE IN RECYCLING EFFORTS
D) INCREASE IN INDUSTRIAL POLLUTION
ANSWER: A
The main function of decomposers in an ecosystem is:
A) RECYCLE NUTRIENTS
B) MANUFACTURE FOOD
C) CONSUME HERBIVORES
D) ABSORB SOLAR ENERGY
ANSWER: A
Nutrients like nitrogen and phosphorus:
A) ARE RECYCLED IN ECOSYSTEMS
B) ARE LOST AS HEAT
C) FLOW ONLY ONCE
D) DO NOT PASS THROUGH CONSUMERS
ANSWER: A
Ecological succession refers to:
A) GRADUAL REPLACEMENT OF SPECIES OVER TIME
B) SUDDEN CHANGE IN ECOSYSTEM
C) SEASONAL MIGRATION OF ANIMALS
D) FOOD CHAIN INTERACTION
ANSWER: A
The facilitation hypothesis of succession means:

A) EARLY SPECIES MAKE ENVIRONMENT SUITABLE FOR LATER ONES
B) LATER SPECIES TOLERATE FEWER RESOURCES
C) SPECIES RESIST COMPETITORS
D) LONGER-LIVED SPECIES DOMINATE DIRECTLY
ANSWER: A
Succession after forest fire is an example of:
A) SECONDARY SUCCESSION
B) PRIMARY SUCCESSION
C) RETROGRESSIVE SUCCESSION
D) INHIBITION
ANSWER: A
The forest floor mainly consists of:
A) LITTER, HUMUS, DECOMPOSING MATERIAL
B) DOMINANT TREES
C) SHRUBS AND SEEDLINGS
D) MOSSES AND FERNS ONLY
ANSWER: A
Which type of forest is called the “rainforest”?
A) EQUATORIAL EVERGREEN FOREST
B) TEMPERATE DECIDUOUS FOREST
C) CONIFEROUS FOREST
D) MANGROVE FOREST
ANSWER: A
Grasslands cover about:
A) 32% OF PLANT COVER
B) 10% OF EARTH’S SURFACE
C) 50% OF BIOMASS
D) 70% OF ECOSYSTEMS
ANSWER: A
Which ecological pyramid can never be inverted?
A) Pyramid of energy
B) Pyramid of biomass
C) Pyramid of number
D) All pyramids
ANSWER: A
The most fertile soils are found in:
A) GRASSLANDS
B) DESERTS
C) FORESTS
D) TUNDRA
ANSWER: A
The most famous desert plant is:
A) CACTUS
B) NEEM
C) BANYAN
D) MANGO
ANSWER: A
Decomposers are few in deserts because:
A) POOR ORGANIC MATTER AND VEGETATION
B) HIGH RAINFALL
C) LACK OF CONSUMERS
D) PRESENCE OF REPTILES
ANSWER: A
The primary producers in aquatic ecosystems are:
A) PHYTOPLANKTON
B) FISH
C) ZOOPLANKTON
D) CRUSTACEANS
ANSWER: A
The warm upper layer of a lake is called:
A) EPILIMNION
B) HYPOLIMNION
C) METALIMNION
D) THERMOCLINE

ANSWER: A
The factor that has the major influence on aquatic ecosystems is:
A) LIGHT AND TEMPERATURE
B) SOIL TYPE
C) CANOPY GAPS
D) FOREST COVER
ANSWER: A
Approximately how many species have been recorded in the world?
A) 1.5 MILLION
B) 1.5 LAKH
C) 15 LAKH
D) 15 MILLION
ANSWER: A
Genetic diversity refers to:
A) VARIATIONS OF GENES WITHIN A SPECIES OR POPULATION
B) VARIETY OF SPECIES IN A GIVEN AREA
C) DIFFERENCES IN ECOSYSTEMS IN A REGION
D) DISTRIBUTION OF ORGANISMS ON EARTH
ANSWER: A
Species diversity means:
A) VARIETY AND ABUNDANCE OF SPECIES IN A REGION
B) NUMBER OF HABITATS IN A GIVEN ECOSYSTEM
C) VARIATIONS IN GENETIC MAKEUP OF ORGANISMS
D) DIFFERENCES IN ECOSYSTEMS ACROSS CONTINENTS
ANSWER: A
Ecosystem diversity deals with:
A) DIVERSITY OF HABITATS, BIOTIC COMMUNITIES, AND ECOLOGICAL PROCESSES
B) VARIETY OF LIFE FORMS AT MOLECULAR LEVEL
C) GENETIC DIFFERENCES WITHIN A SPECIES
D) INTERBREEDING BETWEEN RELATED SPECIES
ANSWER: A
In a forest ecosystem, primary consumers are:
A) Herbivores
B) Carnivores
C) Decomposers
D) Omnivores
ANSWER: A
The most stable ecosystem is:
A) Ocean
B) Desert
C) Forest
D) Grassland
ANSWER: A
Which of the following shows genetic diversity?
A) DIFFERENT BREEDS OF DOGS
B) FORESTS, GRASSLANDS, DESERTS
C) NUMBER OF SPECIES IN A CORAL REEF
D) ALL SPECIES OF BIRDS
ANSWER: A
Which is the correct order of levels of biodiversity (from smallest to largest)?
A) GENETIC → SPECIES → ECOSYSTEM
B) ECOSYSTEM → SPECIES → GENETIC
C) SPECIES → GENETIC → ECOSYSTEM
D) GENETIC → ECOSYSTEM → SPECIES
ANSWER: A
Example of species diversity is:
A) WHEAT, RICE, MAIZE
B) DESERT, RAINFOREST, MANGROVES
C) TWO VARIETIES OF MANGO
D) DIFFERENT BREEDS OF CATTLE
ANSWER: A
Which of the following is the broadest level of biodiversity?
A) ECOSYSTEM
B) GENETIC

C) SPECIES
D) POPULATION
ANSWER: A
Biodiversity hotspot refers to:
A) REGION WITH HIGH SPECIES RICHNESS AND ENDEMISM
B) REGION WITH LOW NUMBER OF SPECIES
C) AREA WITH ONLY ENDANGERED SPECIES
D) PLACE WITH ONLY GENETIC VARIATIONS
ANSWER: A
Which of the following is NOT an example of ecosystem diversity?
A) VARIETIES OF WHEAT
B) CORAL REEFS
C) TROPICAL RAINFORESTS
D) ALPINE MEADOWS
ANSWER: A
Which type of biodiversity provides adaptability to changing environments?
A) GENETIC DIVERSITY
B) SPECIES DIVERSITY
C) ECOSYSTEM DIVERSITY
D) NONE OF THESE
ANSWER: A
Genes are defined as:
A) FUNDAMENTAL UNITS OF HEREDITY MADE UP OF DNA
B) UNITS OF CHROMOSOMES THAT CONTROL REPRODUCTION
C) PROTEINS THAT CONTROL METABOLISM
D) CHEMICAL MESSENGERS IN BLOOD
ANSWER: A
Genes carry instructions that determine:
A) TRAITS LIKE EYE COLOR, HEIGHT, AND SURVIVAL
B) ONLY REPRODUCTION
C) ONLY BODY WEIGHT
D) ENVIRONMENTAL CHANGES
ANSWER: A
Genetic variation within a species is important because:
A) IT ALLOWS POPULATIONS TO EVOLVE UNDER CHANGING CONDITIONS
B) IT INCREASES THE RISK OF EXTINCTION
C) IT REDUCES ADAPTABILITY
D) IT PREVENTS REPRODUCTION
ANSWER: A
Which of the following represents the correct sequence of energy flow?
A) Sun → Producer → Primary consumer → Secondary consumer → Decomposer
B) Sun → Producer → Secondary consumer → Primary consumer → Decomposer
C) Producer → Sun → Primary consumer → Secondary consumer → Decomposer
D) Sun → Primary consumer → Producer → Decomposer → Secondary consumer
ANSWER: A
What happens to a population without genetic variation in the face of new environmental challenges?
A) IT FACES INCREASED RISK OF EXTINCTION
B) IT THRIVES EASILY
C) IT ADAPTS QUICKLY
D) IT DEVELOPS MORE MUTATIONS AUTOMATICALLY
ANSWER: A
If a population is exposed to a new disease, survival depends on:
A) EXISTENCE OF RESISTANCE GENES IN THE POPULATION
B) ISOLATION OF ALL INDIVIDUALS
C) SIZE OF THE POPULATION ONLY
D) RATE OF ENVIRONMENTAL POLLUTION
ANSWER: A
Why are endangered species with low genetic variation more at risk of extinction?
A) THEY CANNOT EVOLVE IN RESPONSE TO ENVIRONMENTAL CHANGES
B) THEY HAVE HIGHER MUTATION RATES
C) THEY INTERBREED TOO FREQUENTLY
D) THEY ARE RESISTANT TO MOST DISEASES

ANSWER: A
Which species has high genetic variation according to the passage?
A) INDIAN RHINOS
B) CHEETAHS
C) TIGERS
D) ELEPHANTS
ANSWER: A
Which species has low genetic variation according to the passage?
A) CHEETAHS
B) INDIAN RHINOS
C) LIONS
D) ELEPHANTS
ANSWER: A
Species living in small or isolated areas generally:
A) DEVELOP INTO DISTINCT LOCALIZED POPULATIONS
B) SHOW HIGH GENE FLOW
C) RETAIN UNIFORM TRAITS EVERYWHERE
D) NEVER ADAPT TO THE ENVIRONMENT
ANSWER: A
Species inhabiting large areas and interbreeding widely usually show:
A) HIGH RATE OF GENE FLOW AND FEW LOCALIZED CHARACTERISTICS
B) LOW ADAPTABILITY TO ENVIRONMENTAL CHANGES
C) INCREASED RISK OF EXTINCTION
D) DISTINCT REGIONAL POPULATIONS
ANSWER: A
Which of the following has been identified as the major cause of biodiversity loss?
A) HUMAN ACTIVITIES
B) NATURAL DISASTERS
C) GENETIC MUTATIONS
D) EVOLUTION
ANSWER: A
Which of the following is NOT an example of ecosystem diversity?
A) VARIETIES OF RICE
B) TROPICAL RAINFORESTS
C) GRASSLANDS
D) WETLANDS
ANSWER: A
India accounts for what percentage of the world’s land area?
A) 2.4%
B) 1.8%
C) 3.2%
D) 5%
ANSWER: A
Which term refers to the maximum energy available to a consumer population after respiration losses of producers?
A) Net primary productivity (NPP)
B) Gross primary productivity (GPP)
C) Secondary productivity
D) Biomass productivity
ANSWER: A
India harbors approximately what percentage of the world’s recorded species?
A) 7–8%
B) 3–4%
C) 5–6%
D) 10%
ANSWER: A
How many plant species are recorded in India?
A) 47,000
B) 25,000
C) 35,000
D) 60,000
ANSWER: A
How many species of plants in India are endemic?

A) 15,000
B) 8,000
C) 10,000
D) 12,000
ANSWER: A
How many animal species are recorded in India?
A) 1,00,000+
B) 80,000
C) 90,000
D) 1,20,000
ANSWER: A
India ranks ___ in the world for plant richness.
A) 10TH
B) 5TH
C) 8TH
D) 12TH
ANSWER: A
Which country has the second largest number of endemic species in the world?
A) INDIA
B) BRAZIL
C) INDONESIA
D) AUSTRALIA
ANSWER: A
Which of the following is not a type of ecosystem in India?
A) TUNDRA ECOSYSTEMS
B) ALPINE ECOSYSTEMS
C) TROPICAL RAINFORESTS
D) DESERT ECOSYSTEMS
ANSWER: A
The Thar Desert is an example of which type of ecosystem?
A) DESERT
B) COASTAL
C) GRASSLAND
D) ALPINE
ANSWER: A
Mangroves and coral reefs are examples of which ecosystem?
A) MARINE AND COASTAL
B) GRASSLAND
C) WETLAND
D) DESERT
ANSWER: A
The Western Ghats are famous for which type of ecosystem?
A) TROPICAL RAINFOREST
B) DESERT
C) GRASSLAND
D) TUNDRA
ANSWER: A
In ecological succession, the first species to colonize a barren area are called:
A) Pioneer species
B) Climax community
C) Secondary species
D) Keystone species
ANSWER: A
India is the center of origin for which of the following crops?
A) RICE, SUGARCANE, TURMERIC
B) WHEAT, BARLEY, MAIZE
C) COFFEE, TEA, COCOA
D) CORN, SOYBEAN, SUNFLOWER
ANSWER: A
Which biodiversity hotspot is not found in India?
A) AMAZON BASIN
B) HIMALAYA
C) INDO-BURMA

D) INDO-MALAYAN
ANSWER: A
The Andaman & Nicobar Islands belong to which biodiversity hotspot?
A) INDO-BURMA
B) HIMALAYA
C) INDO-MALAYAN
D) WESTERN GHATS
ANSWER: A
The Sundarbans mangrove is located in which state?
A) WEST BENGAL
B) KERALA
C) GUJARAT
D) ODISHA
ANSWER: A
The Western Ghats hotspot extends over how many states mainly?
A) 6
B) 2
C) 3
D) 4
ANSWER: A
Which Indian state has the highest forest cover?
A) MADHYA PRADESH
B) ARUNACHAL PRADESH
C) CHHATTISGARH
D) ODISHA
ANSWER: A
Which of the following is a major cause of biodiversity loss?
A) HABITAT LOSS
B) PHOTOSYNTHESIS
C) POLLINATION
D) SEED DISPERSAL
ANSWER: A
Poaching of wildlife refers to:
A) ILLEGAL HUNTING
B) LEGAL HUNTING
C) BIRD MIGRATION
D) ANIMAL RESCUE
ANSWER: A
Which of the following is an example of man-wildlife conflict?
A) CROP RAIDING BY ELEPHANTS
B) POACHING
C) DEFORESTATION
D) AFFORESTATION
ANSWER: A
Habitat fragmentation means:
A) DIVISION OF HABITATS INTO SMALLER PATCHES
B) INCREASE IN LARGE FORESTS
C) CONNECTING TWO ECOSYSTEMS
D) REGENERATION OF PLANTS
ANSWER: A
The ecosystem where decomposers play the most significant role in recycling nutrients is:
A) Forest floor
B) Desert
C) Open ocean
D) Tundra
ANSWER: A
Which animal is often poached for its tusks?
A) ELEPHANT
B) TIGER
C) RHINO
D) LEOPARD
ANSWER: A
Which bird is hunted for its feathers?

A) HORNBILL
B) PEACOCK
C) SPARROW
D) PIGEON
ANSWER: A
Which wildlife species in India is highly threatened due to poaching for skin and bones?
A) TIGER
B) LEOPARD
C) LION
D) PANTHER
ANSWER: A
Which of the following is a major wetland ecosystem in India?
A) CHILIKA LAKE
B) THAR DESERT
C) WESTERN GHATS
D) NILGIRIS
ANSWER: A
Which biodiversity hotspot covers North-East India?
A) INDO-BURMA
B) HIMALAYA
C) SUNDARBANS
D) DECCAN PLATEAU
ANSWER: A
Which biodiversity hotspot includes the entire Indian Himalayan region?
A) HIMALAYA
B) WESTERN GHATS
C) INDO-BURMA
D) INDO-MALAYAN
ANSWER: A
Which species is endemic to India?
A) ASIATIC LION
B) PANDA
C) KANGAROO
D) POLAR BEAR
ANSWER: A
Which ecosystem is associated with coral reefs?
A) MARINE
B) FRESHWATER
C) DESERT
D) ALPINE
ANSWER: A
Which region is known as the “Lung of India” due to dense forest cover?
A) NORTH-EAST INDIA
B) SUNDARBANS
C) HIMALAYAS
D) WESTERN GHATS
ANSWER: A
In which year did the Convention on Biological Diversity come into force?
A) 1992
B) 1980
C) 1995
D) 2000
ANSWER: A
Which factor limits energy flow efficiency between trophic levels?
A) Heat loss through respiration
B) Abundance of producers
C) Herbivore population size
D) Nutrient cycling
ANSWER: A
Biosphere reserves are established for:
A) CONSERVATION OF BIODIVERSITY
B) AGRICULTURE
C) MINING

D) URBANIZATION
ANSWER: A
Which of the following is a biosphere reserve in India?
A) NILGIRI
B) GIR
C) PERIYAR
D) RANTHAMBORE
ANSWER: A
Which biodiversity hotspot is home to one of the richest coral reef systems in India?
A) GULF OF MANNAR
B) HIMALAYA
C) INDO-BURMA
D) WESTERN GHATS
ANSWER: A
Which state is known as the “Land of the Rhino”?
A) ASSAM
B) MADHYA PRADESH
C) GUJARAT
D) KERALA
ANSWER: A
Which animal is often killed due to human-tiger conflict?
A) CATTLE
B) DEER
C) ELEPHANT
D) GOAT
ANSWER: A
The Great Indian Bustard is threatened mainly due to:
A) HABITAT LOSS
B) OVERGRAZING
C) POACHING
D) POLLUTION
ANSWER: A
Which is the largest mangrove forest in India?
A) SUNDARBANS
B) BHITARKANIKA
C) PICHAVARAM
D) VEDARANYAM
ANSWER: A
Which is a major threat to marine biodiversity?
A) OVERFISHING
B) POLLINATION
C) PHOTOSYNTHESIS
D) RAINFALL
ANSWER: A
Which national park is famous for Asiatic Lions?
A) GIR
B) CORBETT
C) KANHA
D) KAZIRANGA
ANSWER: A
Which bird sanctuary is in Bharatpur, Rajasthan?
A) KEOLADEO
B) NAL SAROVAR
C) RANGANATHITTU
D) CHILIKA
ANSWER: A
The sequence of organisms through which energy flows in an ecosystem is called:
A) Food chain
B) Food web
C) Food pyramid
D) Ecological succession
ANSWER: A
Which term refers to species found only in a particular region?

A) ENDEMIC
B) EXOTIC
C) INVASIVE
D) NATIVE
ANSWER: A
Which Indian state is famous for coral reefs in Lakshadweep?
A) LAKSHADWEEP UT
B) KERALA
C) TAMIL NADU
D) GUJARAT
ANSWER: A
Which species is known as the “National Aquatic Animal of India”?
A) DOLPHIN (GANGES RIVER DOLPHIN)
B) DUGONG
C) CROCODILE
D) TORTOISE
ANSWER: A
Which ecosystem plays a major role in protecting coastlines from erosion?
A) MANGROVES
B) GRASSLANDS
C) ALPINE FORESTS
D) DESERTS
ANSWER: A
The Nilgiri Biosphere Reserve lies in which biodiversity hotspot?
A) WESTERN GHATS
B) HIMALAYA
C) INDO-BURMA
D) INDO-MALAYAN
ANSWER: A
Which of the following is NOT a major threat to endangered species?
A) RESPONSIBLE ECOTOURISM
B) HABITAT LOSS AND DESTRUCTION
C) CLIMATE CHANGE
D) INTRODUCTION OF INVASIVE SPECIES
ANSWER: A
Which international organisation maintains the Red List of Threatened Species?
A) INTERNATIONAL UNION FOR CONSERVATION OF NATURE (IUCN)
B) WORLD HEALTH ORGANIZATION (WHO)
C) UNITED NATIONS ENVIRONMENT PROGRAMME (UNEP)
D) FOOD AND AGRICULTURE ORGANIZATION (FAO)
ANSWER: A
What does Critically endangered species mean?
A) EXTREMELY HIGH RISK OF EXTINCTION IN THE WILD
B) HIGH RISK OF ENDANGERMENT IN THE WILD
C) LIKELY TO BECOME ENDANGERED SOON
D) KNOWN ONLY TO SURVIVE IN CAPTIVITY
ANSWER: A
Which endemic animal is found only in Gir Forest of Gujarat?
A) ASIATIC LION
B) NILGIRI TAHR
C) BISON
D) RHINOCEROS
ANSWER: A
The species which are in danger of extinction are called:
A) ENDANGERED SPECIES
B) VULNERABLE SPECIES
C) RARE SPECIES
D) ENDEMIC SPECIES
ANSWER: A
Which of the following represents a grazing food chain?
A) Grass → Grasshopper → Frog → Snake
B) Dead plants → Fungi → Bacteria
C) Algae → Zooplankton → Fish
D) Lion → Hyena → Vulture

ANSWER: A
Which one of the following is not responsible for the decline in India's biodiversity?
A) AFFORESTATION
B) MINING ACTIVITIES
C) HUNTING AND POACHING
D) FOREST FIRE
ANSWER: A
The Wildlife Protection Act was implemented in:
A) 1972
B) 1971
C) 2010
D) 1982
ANSWER: A
The Indian government launched Project Tiger in which year?
A) 1973
B) 1965
C) 1982
D) 1995
ANSWER: A
IUCN maintains a list of threatened species known as the:
A) RED LIST
B) GREEN BOOK
C) BLUE LIST
D) WHITE PAPER
ANSWER: A
Which of the following is considered the biggest threat to endangered species today?
A) HABITAT LOSS AND DESTRUCTION
B) POLLUTION
C) NATURAL DISASTERS
D) DISEASE
ANSWER: A
The Red Data Book provides data on:
A) ENDANGERED ANIMALS AND PLANTS
B) ENDEMIC SPECIES
C) SPECIES FOUND IN FORESTS
D) ALL OF THE ABOVE
ANSWER: A
___ conservation involves protecting a species in its natural habitat.
A) IN-SITU CONSERVATION
B) EX-SITU CONSERVATION
C) OFF-SITE CONSERVATION
D) ARTIFICIAL CONSERVATION
ANSWER: A
What is an endemic species?
A) SPECIES RESTRICTED TO A PARTICULAR GEOGRAPHIC AREA
B) SPECIES THAT HAVE GONE EXTINCT
C) SPECIES FOUND IN MANY GEOGRAPHIC AREAS
D) SPECIES WHICH ARE IN LESS NUMBER
ANSWER: A
The Purple Frog is an endemic species found in the rainforests of:
A) WESTERN GHATS
B) EASTERN GHATS
C) ARAVALLI RANGE
D) HIMALAYAS
ANSWER: A
Which of the following is NOT a method of in-situ conservation?
A) BOTANICAL GARDENS
B) SACRED GROVES
C) WILDLIFE SANCTUARIES
D) MARINE PROTECTED AREAS
ANSWER: A
The interconnected network of food chains in an ecosystem is known as:

A) Food web
B) Food chain
C) Trophic level
D) Food pyramid
ANSWER: A
The consequence of the destruction of habitat for an endemic species causes:
A) THE SPECIES IS AT A HIGH RISK OF EXTINCTION
B) THE SPECIES WILL MOVE TO ANOTHER LOCATION
C) THE SPECIES POPULATION WILL INCREASE
D) THE SPECIES WILL ADAPT TO THE NEW CONDITIONS
ANSWER: A
The main focus of conservation efforts for endemic species is:
A) PROTECTING AND PRESERVING THEIR SPECIFIC HABITAT
B) ESTABLISHING CAPTIVE BREEDING PROGRAMS IN ZOOS
C) CONTROLLING THE POPULATION OF INVASIVE SPECIES
D) TRANSLOCATING THEM TO MULTIPLE REGIONS
ANSWER: A
What is the main purpose of creating biodiversity hotspots?
A) TO PROTECT AREAS WITH HIGH ENDEMISM AND SPECIES RICHNESS
B) TO PROTECT AREAS WITH LOW SPECIES DIVERSITY
C) TO PROMOTE TOURISM IN NATURAL AREAS
D) TO ENCOURAGE DEFORESTATION FOR AGRICULTURE
ANSWER: A
What is the difference between in-situ and ex-situ conservation?
A) THE LOCATION WHERE THE CONSERVATION TAKES PLACE
B) THE TYPE OF SPECIES BEING CONSERVED
C) THE HUMAN ACTIVITY
D) THE DURATION OF THE CONSERVATION PROGRAM
ANSWER: A
Biological Diversity Act was implemented in the year:
A) 2002
B) 1972
C) 1992
D) 1973
ANSWER: A
The Indian government launched Project Elephant in which year?
A) 1992
B) 1973
C) 1982
D) 1995
ANSWER: A
Where was the first tiger reserve established in India?
A) JIM CORBETT NATIONAL PARK
B) BANDIPUR NATIONAL PARK
C) KANHA NATIONAL PARK
D) SUNDARBANS NATIONAL PARK
ANSWER: A
Which of the following is a primary air pollutant?
A) Sulfur dioxide
B) Ozone
C) Smog
D) Acid rain
ANSWER: A
The major contributor to urban air pollution is:
A) Transportation
B) Agriculture
C) Mining
D) Forests
ANSWER: A
Electrostatic precipitators are used to control:
A) Particulate matter
B) Noise
C) Thermal pollution
D) Carbon dioxide

ANSWER: A
In a food chain, the green plants are always:
A) Producers
B) Primary consumers
C) Secondary consumers
D) Decomposers
ANSWER: A
Catalytic converters in vehicles help reduce emissions of:
A) CO, NOx, Hydrocarbons
B) SO2, CO2, Particulates
C) Nitrates, Phosphates
D) Dust and Pollen
ANSWER: A
Which pollutant is most associated with ozone layer depletion?
A) CFCs
B) CO2
C) Methane
D) Ozone
ANSWER: A
National AQI in India is monitored by:
A) CPCB
B) WHO
C) UNEP
D) NITI Aayog
ANSWER: A
Blue Baby Syndrome is caused by excess:
A) Nitrate
B) Fluoride
C) Arsenic
D) Lead
ANSWER: A
Eutrophication is caused by excess of:
A) Nitrates and Phosphates
B) Oxygen
C) Iron
D) Chloride
ANSWER: A
The permissible limit of fluoride in drinking water (mg/L) is:
A) 1.0
B) 0.5
C) 2.0
D) 5.0
ANSWER: A
Which treatment stage uses microorganisms to degrade organic matter?
A) Secondary
B) Primary
C) Tertiary
D) Advanced
ANSWER: A
Oil spills in oceans are examples of:
A) Point source pollution
B) Non-point source pollution
C) Natural pollution
D) Radioactive pollution
ANSWER: A
Which heavy metal has a maximum permissible limit of 0.01 mg/L in water?
A) Lead
B) Mercury
C) Arsenic
D) Cadmium
ANSWER: A
Which of the following indicates fecal contamination in water?
A) E. coli
B) Iron

C) Fluoride
D) Calcium
ANSWER: A
The largest artificial ecosystem on Earth is:
A) Agricultural fields
B) Aquarium
C) Reservoirs
D) Urban cities
ANSWER: A
Which ecological pyramid is always upright?
A) Pyramid of energy
B) Pyramid of biomass
C) Pyramid of number
D) All pyramids
ANSWER: A
Which of the following is NOT a soil pollutant?
A) Oxygen
B) Pesticides
C) Fertilizers
D) Mercury
ANSWER: A
Phytoremediation is used to:
A) Remove toxins from soil
B) Treat wastewater
C) Control air pollution
D) Reduce noise levels
ANSWER: A
The major source of soil contamination from cities is:
A) Urban landfills
B) Mining
C) Volcanoes
D) Rainwater
ANSWER: A
Bioaccumulation of heavy metals in the food chain is an effect of:
A) Soil pollution
B) Noise pollution
C) Thermal pollution
D) Light pollution
ANSWER: A
Permissible night-time noise level in residential areas (dB) is:
A) 45
B) 55
C) 65
D) 75
ANSWER: A
Which of the following is a common effect of noise pollution?
A) Hearing loss
B) Asthma
C) Cancer
D) Fluorosis
ANSWER: A
Silence zones are usually established near:
A) Schools and hospitals
B) Markets
C) Factories
D) Bus stations
ANSWER: A
Radioactive pollution is mainly caused by:
A) Plutonium and Uranium
B) CFCs
C) Lead
D) Methane
ANSWER: A
The main pollutant from mining activities is:

A) Heavy metals
B) CO2
C) Ozone
D) Fluoride
ANSWER: A
Acid rain damages aquatic life by lowering:
A) pH
B) Salinity
C) Temperature
D) Hardness
ANSWER: A
In a food pyramid, the largest number of organisms is found at the:
A) Producer level
B) Tertiary consumer level
C) Secondary consumer level
D) Top carnivore level
ANSWER: A
The main source of methane emissions is:
A) Agriculture and wetlands
B) Transport
C) Factories
D) Nuclear plants
ANSWER: A
Baghouse filters are used to:
A) Remove particulates from flue gases
B) Filter water
C) Reduce noise
D) Absorb heavy metals
ANSWER: A
Which pollutant is most associated with Minamata disease?
A) Mercury
B) Lead
C) Arsenic
D) Cadmium
ANSWER: A
Solid Waste Management Rules (2016) were issued by:
A) CPCB
B) WHO
C) UNEP
D) IPCC
ANSWER: A
The effect of long-term arsenic exposure is:
A) Cancer and skin lesions
B) Fluorosis
C) Blue Baby Syndrome
D) Asthma
ANSWER: A
Noise pollution affects birds by:
A) Disturbing communication and breeding
B) Helping migration
C) Increasing reproduction
D) None of the above
ANSWER: A
Thermal pollution is mainly caused by:
A) Power plants and industries
B) Agriculture
C) Forests
D) Urban traffic
ANSWER: A
The permissible limit of arsenic in drinking water (mg/L) is:
A) 0.01
B) 0.1
C) 1.0
D) 0.001

ANSWER: A
Municipal solid waste mainly contributes to:
A) Soil pollution
B) Air pollution
C) Thermal pollution
D) Radioactive pollution
ANSWER: A
Which of the following is an example of secondary pollutant?
A) Smog
B) CO
C) NOx
D) SO2
ANSWER: A
Which of the following organisms occupies the highest trophic level in a food chain?
A) Top carnivores
B) Herbivores
C) Producers
D) Decomposers
ANSWER: A
The CPCB full form is:
A) Central Pollution Control Board
B) Central Power Control Board
C) Centre for Pollution Check Bureau
D) Central Pollution Case Bureau
ANSWER: A
The maximum permissible limit of mercury in water (mg/L) is:
A) 0.001
B) 0.1
C) 0.01
D) 0.05
ANSWER: A
The main effect of excess fluoride in water is:
A) Dental and skeletal fluorosis
B) Cancer
C) Hearing loss
D) Asthma
ANSWER: A
Urban heat islands are associated with which pollution type?
A) Thermal pollution
B) Air pollution
C) Noise pollution
D) Radioactive pollution
ANSWER: A
Acid mine drainage is associated with:
A) Mining
B) Forests
C) Fertilizers
D) Oil spills
ANSWER: A
Which type of pollution disrupts circadian rhythms?
A) Light
B) Noise
C) Radioactive
D) Soil
ANSWER: A
The noise pollution limit for commercial areas during the day is:
A) 65 dB
B) 50 dB
C) 55 dB
D) 75 dB
ANSWER: A
Smog is a mixture of:
A) Smoke and fog

B) Sand and dust
C) CO_2 and O_2
D) Rain and dust
ANSWER: A
Which pollutant is mainly responsible for global warming?
A) CO_2
B) SO_2
C) O_3
D) CFCs
ANSWER: A
The CPCB permissible limit for nitrates in drinking water (mg/L) is:
A) 45
B) 10
C) 25
D) 100
ANSWER: A
In a detritus food chain, the primary source of energy is:
A) Dead organic matter
B) Sunlight
C) Producers
D) Herbivores
ANSWER: A
The main effect of carbon monoxide poisoning is:
A) Reduced oxygen transport in blood
B) Asthma
C) Fluorosis
D) Hearing loss
ANSWER: A
Which of the following solid wastes describes the term ‘Municipal Solid Waste’?
A) Non-hazardous
B) Toxic
C) Hazardous
D) Non-toxic
ANSWER: A
Why is it difficult to recycle plastics?
A) It contains different types of polymer resins
B) It is very hard
C) It comes in different sizes
D) It is adhesive
ANSWER: A
Which of the following is done on an individual level?
A) Source reduction
B) Burning
C) Disposal
D) Recycling
ANSWER: A
The organic material of the solid waste will decompose
A) By the action of microorganisms
B) By the flow of water
C) By the soil particles
D) By oxidation
ANSWER: A
The process of burning municipal solid wastes under suitable temperature and conditions in a specific furnace is called
A) Incineration
B) Landfill
C) Recycling
D) Vermi composting
ANSWER: A
The burning of solid waste is not recommended because
A) It causes several environmental issues
B) It is very costly
C) It requires a lot of space
D) It requires modern technologies

ANSWER: A
When the organic matter present in the sanitary landfill decomposes, it generates
A) Methane
B) Nitrogen
C) Hydrogen
D) All of the above
ANSWER: A
Which of the following is the oldest and most common method used to dump solid wastes?
A) Landfill
B) River
C) Ocean
D) None of the above
ANSWER: A
Which of the following statements is incorrect for plastic waste?
A) It is used to make compost
B) It lasts for a longer period of time
C) Toxic fumes are produced when burnt
D) All of the above
ANSWER: A
Which food chain correctly shows the flow of energy in a pond ecosystem?
A) Phytoplankton → Zooplankton → Small fish → Large fish
B) Zooplankton → Phytoplankton → Small fish → Large fish
C) Large fish → Small fish → Zooplankton → Phytoplankton
D) Phytoplankton → Small fish → Zooplankton → Large fish
ANSWER: A
Which of the following can be recycled many times?
A) Aluminium
B) Wood
C) Plastic
D) Organic materials
ANSWER: A
Which of the following gases is produced from landfill wastes?
A) Biogas
B) Natural gas
C) Liquified petroleum gas
D) All of the above
ANSWER: A
Which country produces the most e-waste per year?
A) USA
B) India
C) China
D) France
ANSWER: A
The most valuable part of a PC or TV is the
A) Circuit boards that contain silver and gold
B) Lead in the CRT
C) Copper in the cathode yoke
D) None of the above
ANSWER: A
Which of the following is not a basic characteristic in determining whether solid waste is hazardous:
A) Morbidity
B) Corrosivity
C) Toxicity
D) Ignitability
ANSWER: A
What was the main reason the construction company decided to implement OHSMS?
A) To reduce frequent workplace accidents
B) To expand business operations
C) To increase marketing reach
D) To cut material costs
ANSWER: A

Which international standard did the company use as a guideline for OHSMS?
A) ISO 45001
B) ISO 9001
C) ISO 14001
D) ISO 27001
ANSWER: A
What was the first step taken by the company in implementing the OHSMS?
A) Gap analysis
B) Employee hiring
C) Risk assessment
D) Marketing campaign
ANSWER: A
How did the company involve employees in the safety process?
A) By forming safety committees
B) By increasing work hours
C) By reducing training sessions
D) By outsourcing safety
ANSWER: A
What was one key benefit achieved after implementing the OHSMS?
A) Improved safety culture and employee morale
B) Increased insurance premiums
C) Project delays due to accidents
D) Increased product defects
ANSWER: A
Why does the pyramid of energy never get inverted?
A) Energy decreases at each trophic level
B) Biomass is always constant
C) Number of organisms increases at higher levels
D) Energy flows in cycles
ANSWER: A
What was one of the main hazards addressed in the manufacturing plant’s OHSMS?
A) Chemical hazards
B) Biological hazards
C) Ergonomic risks
D) Psychological stress
ANSWER: A
Which control measure was introduced to reduce airborne chemical exposure?
A) Ventilation systems
B) Increased work hours
C) Marketing campaigns
D) Financial incentives
ANSWER: A
Why was safety training important in the manufacturing plant’s OHSMS?
A) To teach safe handling of chemicals and machinery
B) To improve sales techniques
C) To reduce wages
D) To speed up production
ANSWER: A
What was a significant outcome of implementing engineering controls?
A) Reduced airborne chemical hazards
B) Increased chemical exposure
C) Higher noise levels
D) More accidents
ANSWER: A
How did employee involvement impact the manufacturing plant’s OHSMS?
A) Improved safety culture and hazard reporting
B) Decreased communication
C) Increased production errors
D) Reduced safety training
ANSWER: A
Which international safety standard did Tata Steel adopt for its OHSMS?
A) ISO 45001
B) ISO 9001
C) ISO 14001

D) ISO 27001
ANSWER: A
What digital technology did Tata Steel use for real-time safety monitoring?
A) Wearable devices and AI systems
B) Social media
C) Drones for marketing
D) RFID for inventory only
ANSWER: A
What was a key result of implementing the OHSMS at Tata Steel?
A) Reduced Lost Time Injury Frequency Rate (LTIFR)
B) Increase in incident rates
C) Less employee engagement
D) Decreased production output
ANSWER: A
What type of safety programs did Tata Steel use to train staff?
A) Safety leadership and behavior-based training
B) Financial literacy programs
C) Marketing training
D) Customer service programs
ANSWER: A
Which prestigious award did Tata Steel receive for its safety performance?
A) Sword of Honour from British Safety Council
B) Golden Peacock for Marketing
C) ISO 9001 from BIS
D) National Award for Innovation
ANSWER: A
In a food web, organisms that feed on both plants and animals are called:
A) Omnivores
B) Herbivores
C) Carnivores
D) Producers
ANSWER: A
Which international standard did Toyota adopt for its Occupational Health and Safety Management System?
A) ISO 45001
B) ISO 9001
C) ISO 14001
D) ISO 27001
ANSWER: A
What continuous improvement philosophy did Toyota apply to workplace safety?
A) Kaizen
B) Six Sigma
C) Lean Startup
D) Agile
ANSWER: A
How did Toyota encourage employee participation in safety management?
A) Through safety committees and open communication channels
B) Limiting feedback
C) Outsourcing safety responsibilities
D) Increasing work hours
ANSWER: A
What engineering controls did Toyota implement to reduce hazard exposure?
A) Machine guards and automated safety devices
B) Larger work shifts
C) Financial bonuses
D) Marketing campaigns
ANSWER: A
What was a key outcome of Toyota’s OHSMS implementation?
A) Reduced lost-time incidents
B) Increased workplace injuries
C) Higher legal penalties
D) Decreased employee engagement
ANSWER: A
OHSMS is primarily designed to:

A) Manage workplace health and safety risks
B) Increase company profits
C) Promote consumer satisfaction
D) Improve product design
ANSWER: A
Which of the following is NOT an objective of OHSMS?
A) Increasing production speed at all costs
B) Preventing accidents and diseases
C) Ensuring safe working conditions
D) Promoting safety culture
ANSWER: A
“Hazard identification and risk assessment” comes under which element of OHSMS?
A) Planning
B) Policy
C) Implementation
D) Monitoring
ANSWER: A
Safety audits, inspections, and reporting are part of which OHSMS element?
A) Monitoring
B) Implementation
C) Policy
D) Improvement
ANSWER: A
Providing PPE and conducting emergency drills fall under:
A) Implementation
B) Policy
C) Planning
D) Review
ANSWER: A
Which ecological pyramid may sometimes appear inverted?
A) Pyramid of biomass
B) Pyramid of energy
C) Pyramid of numbers
D) All pyramids
ANSWER: A
The Plan–Do–Check–Act cycle in OHSMS emphasizes:
A) Continuous improvement
B) Emergency evacuation only
C) Reducing production costs
D) Avoiding employee training
ANSWER: A
Which of the following best represents the “Policy” element of OHSMS?
A) Management commitment to safety
B) Safety audits
C) Corrective actions
D) Hazard reporting
ANSWER: A
Reduced insurance and compensation costs are an example of:
A) OHSMS benefits
B) OHSMS challenges
C) OHSMS standards
D) OHSMS monitoring
ANSWER: A
The National Environmental Protection Act was passed in India in which year?
A) 1986
B) 1981
C) 1995
D) 1974
ANSWER: A
Which of the following Acts gives rights to citizens to file cases against violation of environmental norms?
A) Environment (Protection) Act
B) Air Pollution Act
C) Water Pollution Act

D) Forest Act
ANSWER: A
In which year Forest Conservation Act was passed?
A) 1980
B) 1986
C) 1988
D) 1982
ANSWER: A
The definition of ‘environmental pollution’ under the Environment (Protection Act) is:
A) The presence in the environment of any environmental pollution
B) Any pollution of air, water and soil
C) The presence of any solid, liquid or gaseous substance in the environment that causes injuries to man
D) Any pollution in land, sea and air
ANSWER: A
The three R's which can help us to conserve natural resources for long term use are:
A) Reduce, Recycle, Reuse
B) Recycle, Regenerate, Reuse
C) Reduce, Regenerate, Reuse
D) More than one of the above
ANSWER: A
The Environment Protection Act, 1986 passed in March 1986, it came into force on:
A) 19 November 1986
B) 1 April 1986
C) 1 July 1986
D) 1 January 1987
ANSWER: A
Which one of the following is not a natural pollution?
A) Air pollution
B) Earthquake
C) Flood
D) Cyclone
ANSWER: A
The amount of energy transferred from one trophic level to the next is approximately:
A) 10%
B) 1%
C) 25%
D) 50%
ANSWER: A
Kyoto Protocol is related to:
A) Climate change
B) Air pollution
C) Greenhouse Gas
D) Water pollution
ANSWER: A
Environmental protection has been made a fundamental duty of every citizen of India under Article:
A) 51-A (g)
B) 51
C) 51-A A
D) 51-A (e)
ANSWER: A
The Forest (Conservation) Act extends to the whole of India except:
A) Jammu and Kashmir
B) Uttar Pradesh
C) Karnataka
D) Haryana
ANSWER: A
The Air (Prevention and Control of Pollution) Act was enacted in the year:
A) 1981

B) 1996
C) 2000
D) 1974
ANSWER: A
Noise pollution has been inserted as pollution in the Air Act in:
A) 1987
B) 1981
C) 1982
D) 2000
ANSWER: A
The lion in a grassland food chain is an example of:
A) Tertiary consumer
B) Primary consumer
C) Secondary consumer
D) Producer
ANSWER: A
The flow of energy in an ecosystem is always:
A) Linear
B) Cyclic
C) Multidirectional
D) Reversible
ANSWER: A
Food webs provide more stability to the ecosystem than food chains because:
A) They offer alternative pathways for energy flow
B) They are shorter than food chains
C) They depend only on producers
D) They have fewer trophic levels
ANSWER: A
The variety of life forms at all levels of biological organization is called:
A) Biodiversity
B) Ecology
C) Ecosystem
D) Biomass
ANSWER: A
Which type of biodiversity refers to variations within the same species?
A) Genetic diversity
B) Species diversity
C) Ecosystem diversity
D) Habitat diversity
ANSWER: A
Which type of biodiversity refers to the variety of species in a given area?
A) Species diversity
B) Genetic diversity
C) Ecosystem diversity
D) Population diversity
ANSWER: A
Which type of biodiversity refers to different habitats, biotic communities, and ecological processes?
A) Ecosystem diversity
B) Genetic diversity
C) Species diversity
D) Habitat diversity
ANSWER: A
India is recognized as a mega-diversity nation because:
A) It has a wide variety of species and ecosystems
B) It has the largest forests
C) It has only endemic species
D) It has maximum wetlands
ANSWER: A
The Himalaya and Indo-Burma regions are examples of:
A) Biodiversity hotspots
B) Genetic reserves
C) Wildlife sanctuaries
D) Ex-situ conservation sites

ANSWER: A
Which of the following is a consumptive use value of biodiversity?
A) Fuel wood
B) Aesthetic value
C) Recreational value
D) Cultural value
ANSWER: A
Which of the following is a non-consumptive use value of biodiversity?
A) Ecotourism
B) Food
C) Timber
D) Medicine
ANSWER: A
The greatest threat to biodiversity is:
A) Habitat loss
B) Ecotourism
C) Medicinal plant use
D) Ex-situ conservation
ANSWER: A
Which of the following ecosystems has the highest productivity?
A) Estuary
B) Desert
C) Grassland
D) Tundra
ANSWER: A
The species found only in a particular area and nowhere else are called:
A) Endemic species
B) Endangered species
C) Exotic species
D) Vulnerable species
ANSWER: A
Which of the following is NOT a threat to biodiversity?
A) Ex-situ conservation
B) Poaching of wildlife
C) Habitat destruction
D) Man-wildlife conflict
ANSWER: A
Which biodiversity hotspot in India is richest in endemism?
A) Indo-Burma region
B) Himalaya
C) Sundarbans
D) Gangetic plains
ANSWER: A
Which of the following represents the option value of biodiversity?
A) Future potential use of biodiversity
B) Current use of biodiversity
C) Cultural value of biodiversity
D) Spiritual value of biodiversity
ANSWER: A
The Western Ghats are a hotspot of biodiversity because they:
A) Harbor a large number of endemic species
B) Are densely populated
C) Are used for agriculture
D) Are rich in minerals
ANSWER: A
Which international agreement focuses on the conservation of biodiversity?
A) Convention on Biological Diversity (CBD)
B) Kyoto Protocol
C) Paris Agreement
D) Montreal Protocol
ANSWER: A
Which Indian state is part of both the Indo-Burma and Himalaya hotspots?
A) Arunachal Pradesh
B) Rajasthan

C) Kerala
D) Maharashtra
ANSWER: A
Which of the following is an example of in-situ conservation of biodiversity?
A) National park
B) Zoo
C) Seed bank
D) Botanical garden
ANSWER: A
The IUCN Red List provides information about:
A) Conservation status of species
B) Types of ecosystems
C) Levels of biodiversity
D) Agricultural practices
ANSWER: A
The ethical value of biodiversity refers to:
A) The right of all species to exist
B) Commercial use of species
C) Food and medicine
D) Recreation
ANSWER: A
Which level of consumers directly depends on green plants for energy?
A) Primary consumers
B) Secondary consumers
C) Tertiary consumers
D) Quaternary consumers
ANSWER: A
Overexploitation of resources primarily leads to:
A) Loss of biodiversity
B) Increase in biodiversity
C) Stabilization of ecosystems
D) Formation of new species
ANSWER: A
The term "Ecosystem" was first coined by:
A) A.G. Tansley
B) Charles Darwin
C) Ernst Haeckel
D) Odum
ANSWER: A
The word "Ecology" was first coined by:
A) Ernst Haeckel
B) A.G. Tansley
C) Charles Elton
D) Linnaeus
ANSWER: A
The root word "Eco" in Ecology and Ecosystem is derived from Greek "Oikos", meaning:
A) House or dwelling place
B) Environment
C) Organism
D) Nature
ANSWER: A
Ecology is mainly concerned with:
A) Interactions between organisms and their environment
B) Evolution of organisms
C) Genetic variations
D) Geological processes
ANSWER: A
The relationship between Ecology and Ecosystem can be defined as:
A) Ecology studies interactions, Ecosystem is the structural and functional unit
B) Ecosystem creates species, Ecology destroys them
C) Ecology is smaller than an Ecosystem
D) They are unrelated concepts
ANSWER: A

Which of the following pollutants is most commonly associated with agricultural runoff?
A) Nitrates and phosphates
B) Mercury
C) Lead
D) Asbestos
ANSWER: A
What is eutrophication?
A) Excessive growth of algae due to nutrient pollution
B) Removal of pollutants from water
C) Increase in oxygen levels in water
D) Depletion of nutrients in water
ANSWER: A
The presence of which of the following in drinking water indicates contamination by human or animal waste?
A) Escherichia coli (E. coli)
B) Chlorine
C) Nitrates
D) Iron
ANSWER: A
Acid rain is a type of water pollution caused mainly by:
A) Sulfur dioxide and nitrogen oxides
B) Carbon monoxide and nitrogen
C) Methane and hydrogen
D) Oxygen and helium
ANSWER: A
In an ecosystem, which organisms return nutrients back to the soil?
A) Decomposers
B) Producers
C) Primary consumers
D) Secondary consumers
ANSWER: A
The process of removing salt from seawater is called:
A) Desalination
B) Chlorination
C) Sedimentation
D) Filtration
ANSWER: A
Which of these is not a water-borne disease?
A) Malaria
B) Typhoid
C) Cholera
D) Dysentery
ANSWER: A
Point source pollution refers to pollution that:
A) Can be traced to a specific location
B) Comes from rain
C) Comes from the atmosphere
D) Has no specific origin
ANSWER: A
Which of these is a biological method of water purification?
A) Activated sludge process
B) Boiling
C) Chlorination
D) Reverse osmosis
ANSWER: A
Pesticides and fertilizers are primarily responsible for:
A) Soil pollution
B) Increasing biodiversity
C) Improving soil texture
D) Erosion control
ANSWER: A
Which of the following is a biodegradable pollutant?
A) Paper

B) Plastic
C) Glass
D) DDT
ANSWER: A
What is bioremediation?
A) Use of microorganisms to clean pollutants
B) Use of chemicals to remove pollution
C) Burning of waste
D) Soil erosion control
ANSWER: A
Landfills are a source of:
A) Soil contamination
B) Soil improvement
C) Groundwater recharge
D) Pest control
ANSWER: A
What is leaching in soil?
A) Removal of nutrients by water
B) Fertilizer application
C) Aeration of soil
D) Addition of humus
ANSWER: A
What is smog primarily composed of?
A) Smoke and fog
B) Water vapor and dust
C) Ozone and carbon dioxide
D) Nitrogen and oxygen
ANSWER: A
Which one of the following is a man-made/artificial ecosystem?
A) Aquarium
B) Forest
C) Pond
D) Grassland
ANSWER: A
Which of the following is a greenhouse gas contributing to global warming?
A) Methane
B) Nitrogen
C) Argon
D) Neon
ANSWER: A
What is the effect of ozone depletion?
A) Increased ultraviolet radiation reaching Earth
B) Increased greenhouse effect
C) Decreased rainfall
D) More acid rain
ANSWER: A
Which unit is commonly used to measure air pollution levels (such as particulate matter concentration)?
A) Micrograms per cubic meter ($\mu g/m^3$)
B) Decibel (dB)
C) Hertz (Hz)
D) Watts (W
ANSWER: A
Which of the following is a natural source of air pollution?
A) Volcanic eruptions
B) Factory emissions
C) Automobile exhaust
D) Burning fossil fuels
ANSWER: A
Which unit is used to measure noise levels?
A) Decibel (dB)
B) Watt
C) Hertz
D) Newton

ANSWER: A
What noise level is generally considered the threshold for harmful noise?
A) 85 dB
B) 30 dB
C) 120 dB
D) 60 dB
ANSWER: A
What does MSW stand for in waste management?
A) Municipal Solid Waste
B) Mixed Solid Waste
C) Managed Solid Waste
D) Medical Solid Waste
ANSWER: A
Which type of waste is classified as hazardous?
A) Chemical solvents
B) Food waste
C) Paper waste
D) Plastic bottles
ANSWER: A
The process of converting organic waste into nutrient-rich compost is called:
A) Composting
B) Incineration
C) Landfilling
D) Recycling
ANSWER: A
What is leachate?
A) Liquid formed when waste decomposes in a landfill
B) A type of hazardous waste
C) Solid waste material
D) Gas produced during incineration
ANSWER: A
The source of all energy in an ecosystem is:
A) Sunlight
B) Water
C) Oxygen
D) Soil nutrients
ANSWER: A
Which international treaty deals with hazardous waste movement?
A) Basel Convention
B) Kyoto Protocol
C) Montreal Protocol
D) Paris Agreement
ANSWER: A
Incineration of hazardous waste primarily helps in:
A) Waste volume reduction
B) Producing compost
C) Groundwater recharge
D) Increasing toxicity
ANSWER: A
Which of the following is a solid waste segregation technique?
A) Source separation
B) Bulk dumping
C) Open burning
D) Leachate treatment
ANSWER: A
Which hazardous waste treatment process involves heating waste in the absence of oxygen?
A) Pyrolysis
B) Incineration
C) Composting
D) Landfilling
ANSWER: A
Which solid waste management method recovers energy from waste?
A) Incineration

B) Landfilling
C) Composting
D) Recycling
ANSWER: A
Burning e-waste can release:
A) Dioxins and furans
B) Oxygen
C) Carbon dioxide only
D) Chlorofluorocarbons
ANSWER: A
What is one of the most hazardous materials found in e-waste?
A) Lead
B) Plastic
C) Glass
D) Aluminium
ANSWER: A
Which international standard is commonly used for OHASMS?
A) ISO 45001
B) ISO 9001
C) ISO 27001
D) ISO 14001
ANSWER: A
The primary aim of OHASMS is to:
A) Prevent workplace injuries and illnesses
B) Improve product quality
C) Manage environmental impact
D) Increase production speed
ANSWER: A
Which international event led to the celebration of World Environment Day?
A) Stockholm Conference
B) Rio Earth Summit
C) Paris Agreement
D) Kyoto Protocol
ANSWER: A
